# Miniature contactors Ex9CS

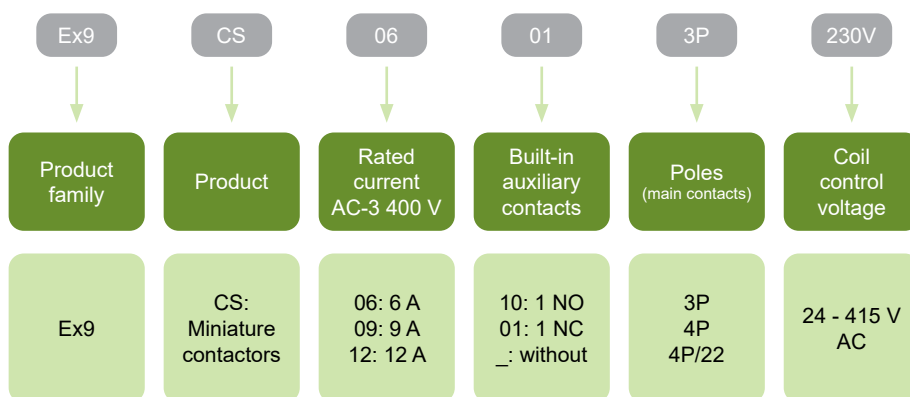

- Tested according to IEC / EN 60947-4-1
- 3 and 4-pole versions
- Rated current AC-3 6, 9 and 12 A at 400 V
- Coil control voltage 24 — 415 V AC
- Rated conditional short circuit current  $I_q = 50 \text{ kA}$
- Suitable for industrial as well as domestic applications
- Mounting onto device rail (DIN) 35 mm or onto panel

Ex9CS contactors bring excellent electric parameters in the form of very compact device. These contactors can be used for both industrial as well as domestic applications. Thermal current and AC-1 load 20 A at 690 V AC allows switching of resistive loads with maximum currents usual for domestic applications. Thanks to compact dimensions, Ex9CS contactors are ideal solution for space limited installations.

Contactors are offered as 3 and 4-pole versions and as a 4-pole version with main contacts configuration 2 normally open and 2 normally closed (4P/22).

# Miniature reversible contactors Ex9CSR

- Reversible combinations of miniature contactors
- Tested according to IEC / EN 60947-4-1
- 3 and 4-pole versions
- Rated current AC-3 6, 9 and 12 A at 400 V
- Coil control voltage 24 — 415 V AC
- Conditional short circuit current  $I_q = 50 \text{ kA}$
- Mechanical interlock
- Mounting onto device rail (DIN) 35 mm or onto panel

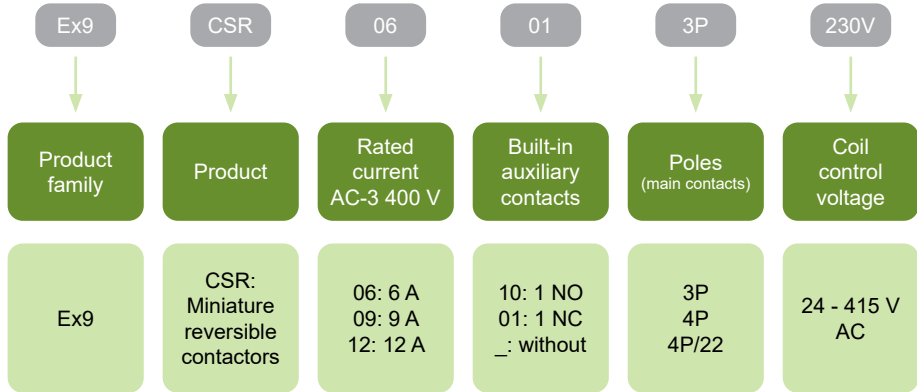

Miniature reversible contactors Ex9CSR brings excellent electric parameters in the form of very compact device. These contactors are used mainly for switching of asynchronous motors with possibility of change of rotation direction. They can also be used for switching two circuits when it is necessary to ensure that maximum one circuit is connected.

The combinations are equipped with mechanical interlock. Additional electrical interlock of control voltages (e.g. for EN 60204) can be implemented by means of auxiliary contacts AX42 or built-in auxiliary contacts.

Thanks to compact dimensions, Ex9CSR contactors are ideal solution for space limited installations.

The same function can be achieved by the combination of two contactors Ex9CS with mechanical interlock MIT41.

# Contactors Ex9C up to 100 A

- Contactors according to IEC / EN 60947-4-1
- Four frame sizes with rated current up to 100 A at 400 V AC-3
- 3-pole versions
- Coil control voltage 24 — 415 V AC
- Rated conditional short circuit current  $I_q = 50 \text{ kA}$
- Suitable mainly for industrial applications, can be used also for domestic ones
- Mounting onto device rail (DIN) 35 or 75 mm (frame sizes 65 and 100) or onto panel

Ex9C contactors are intended for various applications including heavy industrial ones. Splitting into four frame sizes brings optimization of electrical parameters and mechanical dimensions. All these frame sizes share accessory auxiliary contacts. Overload relays Ex9R differ with the frame sizes in order to fit respective contactor of given rated current.

Frame size 18 contains contactors with rated currents AC-3 9, 12 and 18 A at 400 V. Size 38 consists of rated currents 25, 32, 38 A. Version 65 is splitted into currents 40, 50 and 65 A. Finally frame size 100 is covered with rated currents 80 and 100 A.

- Tested according to IEC / EN 60947-4-1
- Four frame sizes with rated current up to 100 A at 400 V AC-3
- 3-pole versions
- Coil control voltage 24 — 415 V AC
- Rated conditional short circuit current  $I_q = 50 \text{ kA}$
- Mechanical interlock between contactors
- Mounting onto device rail (DIN) 35 or 75 mm or onto panel

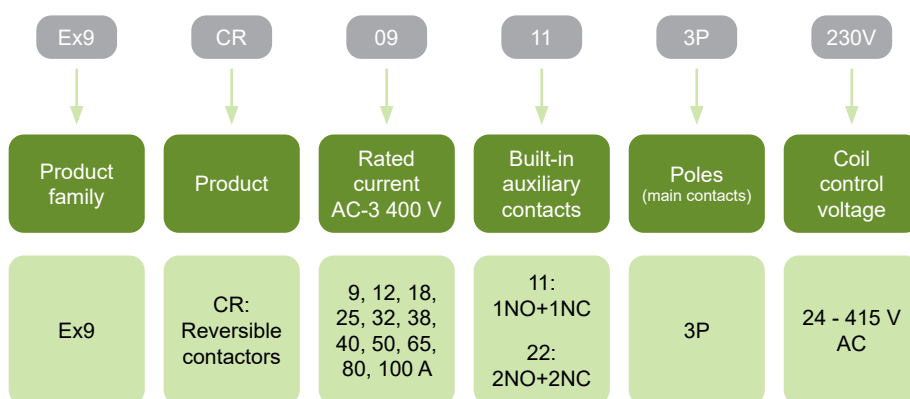

Reversible contactors Ex9CR are intended mainly for switching of asynchronous motors with possibility of change of rotation direction. They can also be used for switching two circuits when it is necessary to ensure that maximum one circuit is connected.

The combinations are equipped with mechanical interlock. Additional electrical interlock of control voltages (e.g. for EN 60204) can be implemented by means of auxiliary contacts AX42 or built-in auxiliary contacts.

Splitting into four frame sizes brings optimization of electrical parameters and mechanical dimensions. All these frame sizes share full range of accessories. Overload relays Ex9R differ with the frame sizes in order to fit respective contactor of given rated current.

The same function can be achieved by the combination of two contactors Ex9C with mechanical interlock MIT4.

# Contactors Ex9C up to 500 A

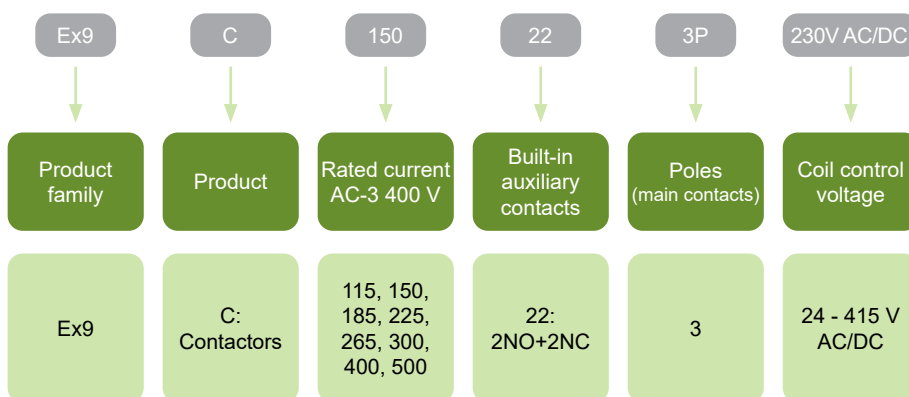

- Contactors according to IEC / EN 60947-4-1
- Rated current 115 - 500 A at 400 V AC-3
- 3-pole versions
- Coil control voltage 24 — 415 V AC/DC
- Rated conditional short circuit current  $I_q = 50 \text{ kA}$
- Suitable for industrial applications
- Mounting onto panel with screws

Ex9C contactors for rated current 115 - 500 A in category AC-3 are intended for various industrial applications including the heavy industrial ones. Splitting into next three frame sizes brings optimization of electrical parameters and mechanical dimensions. All these frame sizes share accessory auxiliary contacts.

The contactors are equipped with controlled coil. It ensures that power consumption is significantly reduced when contactor is closed.

Overload relays Ex9R differ with the frame sizes in order to fit respective contactor of given rated current.

# Capacitor contactors Ex9CC

- Contactors for switching of capacity loads, especially power factor compensation capacitors
- Tested according to IEC / EN 60947-4-1
- 3-pole versions
- Rated current AC-6b up to 100 A
- Coil control voltage 24 — 415 V AC
- Mounting onto DIN rail or onto panel
- Variants for compensation up to 60 kvar at 400 V

Capacitor contactors Ex9CC are used mainly for switching power factor correction blocks. These types of contactors are fitted and delivered with special front mounted block of series resistors which ensures early making of auxiliary poles and connect the capacitor to the network via the set of resistors, when the coil is energized. The contactor with this current suppression block can effectively reduce the current impact of the capacitors and operational overvoltage. Utilization category of these contactors is AC-6b.

# Monitoring relays Ex9JP

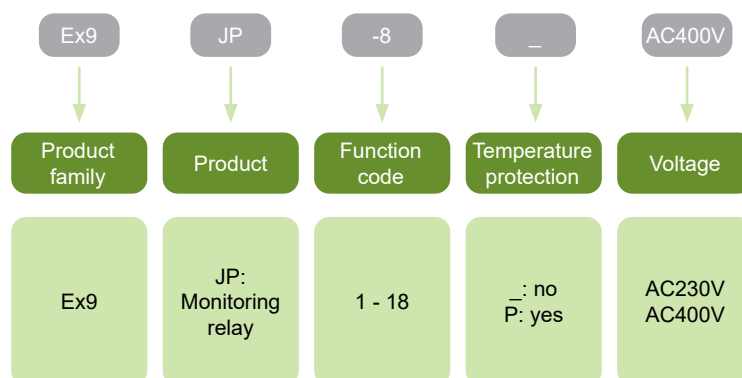

- 3-phase 3-wire or 3-phase 4-wire (with possibility of connection also as 1 or 2 phase)
- Protection against
  - overvoltage
  - undervoltage
  - unbalanced phases
  - phase sequence
  - phase failure
  - overheat
  - load side phase failure
- Delay up to 10 s
- Adjustable or fixed parameters

Monitoring relays Ex9JP are used to provide protection to circuits connected to the power grid. These relays can provide protection against overvoltage, undervoltage, unbalanced phases, phase sequence and phase failure by analyzing voltage on each phase. Temperature control by PTC thermistor in loaded device is optional.

These monitoring relays are provided in various combinations of protective functionalities with fixed or adjustable values.

Common applications are power control systems, air conditioning systems and several motor applications.

- Two versions with 2 change-over contacts (5 or 10 A) and version with 4 change-over contact (3 A)
- Plugs and bases offered separately
- Locking button on a plug
- Status indicator

General purpose plug-in relays Ex9JM are suitable for various industrial applications. Reliable and cost effective switching of smaller loads in control circuits is their main usage. Quick installation and easy maintenance make them convenient to use.

AC and DC versions are available with multiple contact configurations. This relay series is available in 12 – 230 V variants of 3, 5 or 10 A rated current — two versions with two change-over contacts (5 or 10 A) and version with four change-over contacts (3 A). Plug and base are sold separately. Locking the relay in one position is enabled by a manually operated locking button on the front side.

- Manual motor protective circuit breakers
- Meet requirements of IEC/EN 60947-2 and IEC/EN 60947-4-1
- Rated current  $I_n$  up to 32 A at 415 V AC-3
- Rated operating voltage  $U_n$  up to 690V
- Overload, short-circuit and phase-failure protection
- Ambient temperature compensation
- Single frame size suitable also for distribution boards with 45 mm cutout
- Wide range of accessories

Manual motor protective circuit breakers Ex9S32A provide overload, short-circuit and phase-failure protection for the three-phase asynchronous motors with not frequent starting. They are also suitable for power distribution line protection or can be used simply as an isolator.

The right setting of adjustable overload current allows to optimize motor protection by means of circuit breaker. In case of 3P application, correct setting of  $I_r$  provides also protection against overload caused due to a phase lost. Ambient temperature compensation function reduces the impact of ambient temperature. Release testing mechanism enables to test the function of the system and control rotary knob lock mechanism prevents illegal operation.

Motor protective circuit breakers can be combined with wide range of accessories including auxiliary and signal contacts, shunt trip and undervoltage releases. It is possible to create diverse combination of accessories.

Manual motor starters are electromechanical protection devices for the main circuit. They are used mainly to switch motors manually ON/OFF and protect them fuseless against short circuit and loss-phase.

Fuseless protection with a manual motor starter saves costs, space and ensures a quick reaction under short-circuit condition, by switching off the motor within milliseconds.

Manual motor starter combinations are setup together with contactors and overload relays.

- 3-pole versions
- Tripping class 10A
- For direct mounting onto Ex9C(S) contactors series or as a stand-alone device
- Suitable mainly for motor protection against overload or phase lost
- Mounting onto connected contactor or onto device rail (DIN) 35 mm by means of AD5. adaptor

Ex9R overload thermal relays contactors are designed for protection of motors mainly. These relays can be either combined directly with contactors of Ex9CS and Ex9C series or used as a stand-alone device with AD5 adaptor. Relays are available in three frame sizes for rated non-reduced currents from 0.16 — 100 A.

Size Ex9R12 is designed to match miniature contactors Ex9CS. Version Ex9R38 can be mounted onto contactors Ex9C18 and with spacer (in the scope of delivery of the relay) also with size Ex9C38. The last size Ex9R100 can be combined with Ex9C65 and Ex9C100 directly.

Ex9R relays are equipped with 1 NO and 1 NC auxiliary contacts.

# Overload thermal relays Ex9R up to 500 A

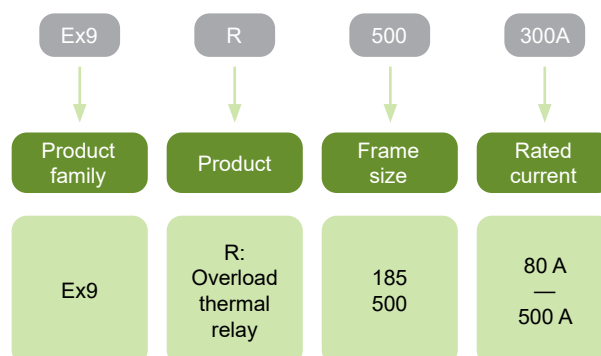

- Overload thermal relays according to IEC / EN 60947-4-1
- Two frame sizes with rated current up to 500 A at 690 V AC-3
- 3-pole versions
- Tripping class 10A
- For direct mounting onto Ex9C contactors or as a stand-alone device with AD adaptor
- Suitable mainly for motor protection against overload or phase lost

Ex9R overload thermal relays contactors are designed for protection of motors mainly. These relays can be either combined directly with contactors of Ex9C115-500 series or used as a stand-alone device with AD5 adaptor. Relays are available in two frame sizes for rated non-reduced currents from 80 — 500 A.

Size Ex9R185 is designed to match contactors of frame size 185 (Ex9C115-185). Version Ex9R500 can be mounted onto contactors of 300 (Ex9C225-300) frame size and also with size 500 (Ex9C400-500).

Ex9R relays are equipped with 1 NO and 1 NC auxiliary contacts as the standard.

- Accessories for contactors of line Ex9CS, Ex9CSR, Ex9C, Ex9CR, Ex9C500 and Ex9CC
- Front-mounted auxiliary contacts AX41/42
- Side-mounted auxiliary contacts AX43/44
- Pneumatic time delay blocks TDD4
- Surge suppressor blocks CCU4
- Mechanical interlocks MIT4
- Connection set PCL for reversible combination

AX41 auxiliary contact units and CCU41 surge suppressor blocks are designed in order to match miniature version of contactors Ex9CS or Ex9CSR. Auxiliary contact units are available with four contacts with all possible contact combinations.

Contactors Ex9C line (Ex9C, Ex9CR) share accessories, i.e. available portfolio can be used for all sizes of contactors (except miniature ones). Every contactor can be equipped with one front-mounted unit (AX42 or TDD4), two units of side-mounted contact AX43/44 (one from the left, the other from the right) and surge suppressor block CCU42/43. Installation of an front-mounted unit does not affect a possibility to install overload thermal relay Ex9R.

Capacitor contactors Ex9CC can be equipped with two units of side-mounted contact AX4311 (one from the left, the other from the right) and surge suppressor block CCU42/43.

# Accessories for overload thermal relays

- Accessories for Overload thermal relays Ex9R
- Adaptors for stand-alone applications of the relays
- Enable mounting of the overload relay onto 35 mm device rail or panel
- Equipped with a set of terminals for wire connection of the relay at both sides

AD5. adaptors are designed in order to allow a use of overload thermal relays Ex9R separately without a contactor of Ex9C(S) series.

Adaptor AD51 fits to overload thermal relays Ex9R12. For relays Ex9R38, the adaptor AD56 is intended. Overload thermal relays type Ex9R100 can be combined with AD53, the size R185 with AD54 and the biggest type size R500 with AD55 adaptor.

- Panel mounted control devices
- Tested according to IEC / EN 60947-5-1
- Various operating head types
- Easy mounting into standard 22 mm panel cutout
- Degree of protection IP65
- Convenient mounting and demounting
- LED lamp units with high brightness
- Configurable system, arbitrary combination of head, contact and LED units for various applications Design compact

Panel mounted control devices line Ex9P1 are used in various control desks, operator panels or machine control circuit parts as well as for control functions in power distribution boards. They are designed as compact devices combined from various modular parts - operating head, basement, contact and illumination units. These parts can be freely combined to realize different functions.

For semi-transparent (illuminated) version there can be used LED unit with high brightness which ensures reliable indication of connected circuit, reduces power consumption and extends service life.

The operating heads are designed in bright colours and streamline surface. They are available in many various colours, shapes and types.

# Panel mounted signal lamps Ex9IL

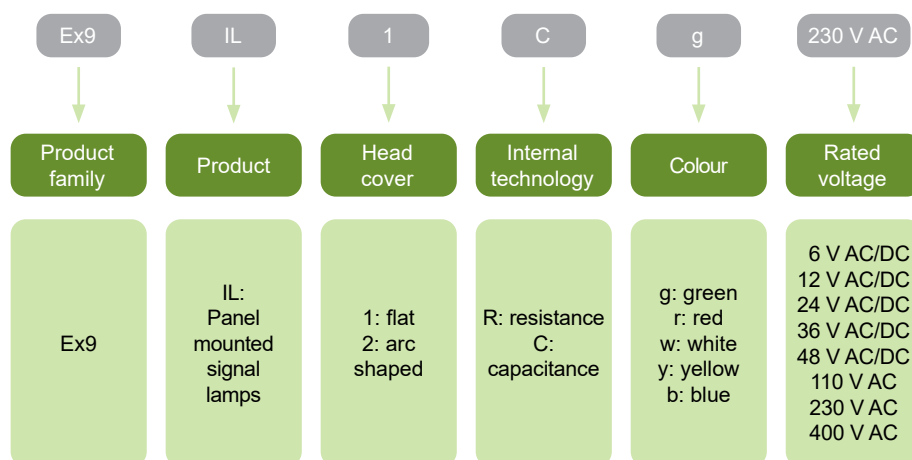

- Panel mounted signal lamps
- Tested according to IEC / EN 60947-5-1
- Degree of protection IP65
- Flat and arc shaped head cover types
- Various colour cover variants
- Height 51 or 53 mm
- Easy mounting into standard 22 mm panel cutout
- LED technology
- Compact design

Panel mounted signal lamps Ex9IL are used in various control desks, operator panels, machine control parts, security systems as well as in power distribution boards where it is necessary to show actual status or some event occurring in the circuit. Device's height is 51 or 53 mm (depends on type) only. There are available versions with white, green, red, yellow or blue head colour in two basic design variants. The first one with flat and the second with arc shaped head cover.

Based on the requested application, there are offered two variants according to internal connection, resistance and capacitance types. Used LED lights reduce current consumption, heat dissipation and extend service life.

# Panel mounted buzzers Ex9PB

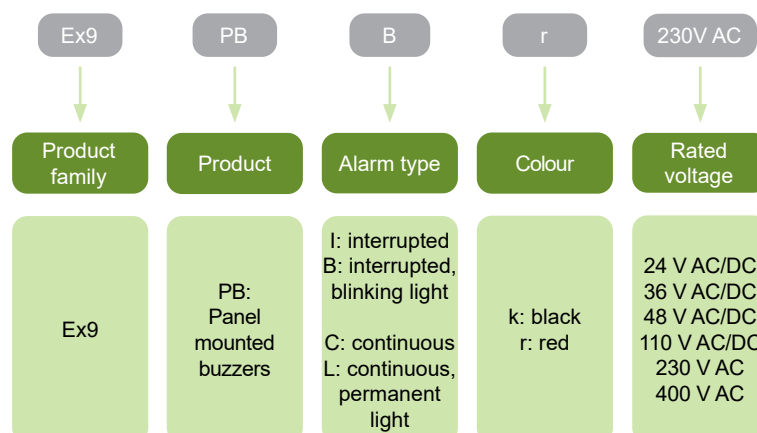

- Panel mounted buzzers
- Meet requirements of IEC / EN 60947-5-1
- Degree of protection IP30
- Interrupted and continuous variants
- Device's height 54 mm
- Easy mounting into 22 mm panel cutout
- Illuminated and non-illuminated versions
- LED lighting technology

Panel mounted buzzers Ex9PB are suitable mainly for industrial applications, security system, etc., where it is necessary to signalize with sound some event occurring in the circuit.

They are offered with device's body height 54 mm and two basic versions, interrupted and continuous. Both of them are available in illuminated and non-illuminated variants with black and semi-transparent red head colour, respectively. Used LEDs reduce current consumption, heat dissipation and extend service life.

### General parameters

Various enclosure types up to 3 holes, yellow or grey colour

Relative humidity of the atmosphere could not exceed 50% when the highest temperature is +40°C

The average temperature during 24 hours could not exceed +35°C

Two grommets are in scope of delivery

### Electrical parameters

Tested according to	IEC / EN 60947-5-1
Rated operational voltage $U_e$	415V AC / 250V DC
