Miniature Circuit Breakers Ex9BH, 10 kA

- Miniature Circuit Breakers according to IEC/EN 60898-1 and IEC/EN 60947-2 (partially)
- Rated short circuit breaking capacity 10 kA
- 1 up to 4-pole versions
- Tripping characteristics B, C, D
- Rated current up to 63 A
- Rated operational voltage 240/415 V AC
- 72 V DC per pole (1P, 2P)
48 V DC per pole (3P, 4P)
- Wide range of accessories
- Toggle colour according to rated current

Ex9BH miniature circuit breakers are suitable for domestic as well as industrial applications. They can be combined with wide range of accessories including auxiliary and signal contacts, shunt trip release, undervoltage and overvoltage release or RCD add-on block. It is possible to create diversified combination of accessories. These combinations are only limited by total number, not by the type of accessories - all components fit together. It can be used up to three units of auxiliary or alarm contacts plus up to two units for release units.

Miniature Circuit Breakers Ex9BN, 6 kA

- Miniature Circuit Breakers according to IEC/EN 60898-1 and IEC/EN 60947-2 (partially)
- Rated short circuit breaking capacity 6 kA
- 1 up to 4-pole versions
- Tripping characteristics B, C, D
- Rated current up to 63 A
- Rated operational voltage 240/415 V AC
- 72 V DC per pole (1P, 2P)
48 V DC per pole (3P, 4P)
- Wide range of accessories

Ex9BN miniature circuit breakers are suitable for domestic as well as industrial applications. They can be combined with wide range of accessories including auxiliary and signal contacts, shunt trip release, undervoltage and overvoltage release or RCD add-on block. It is possible to create diversified combination of accessories. These combinations are only limited by total number, not by the type of accessories - all components fit together. It can be used up to three units of auxiliary or alarm contacts plus up to two units for release units.

Slim MCBs Ex9B40J, 6 kA

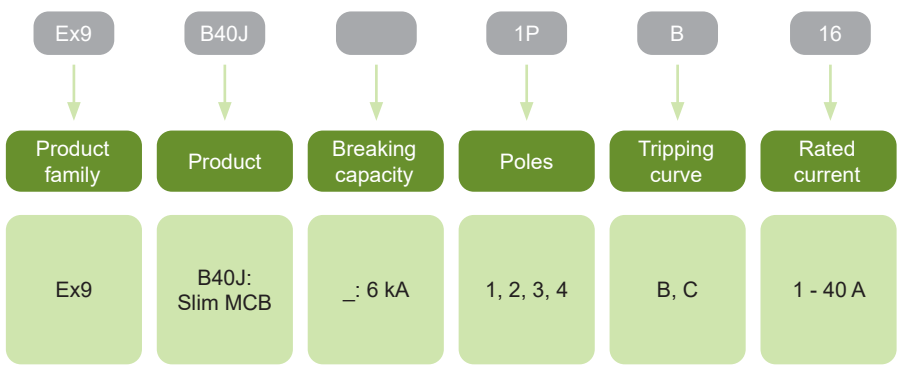

- Slim Miniature Circuit Breakers according to IEC/EN 60898-1
- Rated short circuit breaking capacity 6 kA
- 1 up to 4-pole versions
- Tripping characteristics B, C
- Rated current up to 40 A
- Rated operational voltage 230/400 V AC,
- Wide range of accessories

Slim miniature circuit breakers Ex9B40J are devices suitable for domestic as well as commercial applications. The 3/4 module width - 13.5mm width per pole instead of 18mm of regular devices, makes this series the best option for space demanding installations.

It has been preserved the internal structure of the regular Ex9B product family in the slim miniature circuit breakers, making the Ex9B40J full compatible with the accessories of the regular circuit breakers: shunt trip releases, undervoltage and overvoltage releases, auxiliary contacts and alarm contacts. It can be used up to three units of auxiliary or alarm contacts plus up to two release units.

Miniature Circuit Breakers Ex9B125

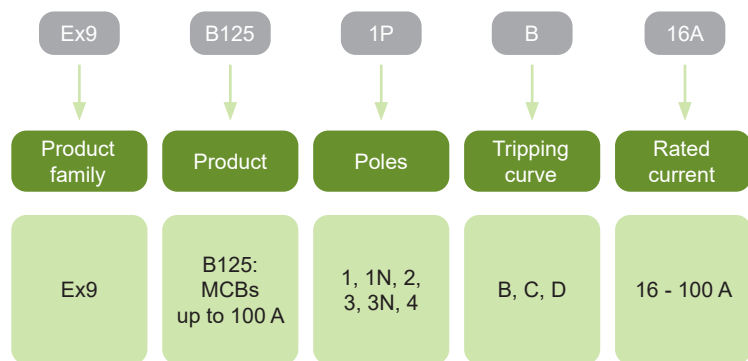

- Miniature Circuit Breakers up to 100 A
- Tested according to EN 60947-2
- High rated breaking capacities up to 25 kA
- 1 up to 4-pole versions
- Rated operating voltage 230/400 V AC
- Wide range of accessories
- Toggle colour according to rated current I_n

Miniature Circuit Breakers Ex9B125 are suitable mainly for power distribution and industrial applications for short-circuit and overload current protection with rated current up to 100 A and a very high rated breaking capacities (tested according to EN 60947-2).

These breakers can be combined with wide range of accessories (same as for Ex9B breakers) including auxiliary and signal contacts, shunt trip releases, undervoltage and overvoltage releases. It is possible to create diversified combination of accessories.

Miniature Circuit Breakers Ex9PN

- Miniature Circuit Breakers
- Tested according to IEC / EN 60898-1
- 1+N pole in one module design
- Rated short circuit breaking capacity I_{cn} 4.5 kA (-S version) and 6 kA (-N version)
- Tripping characteristics B, C
- Rated current up to 40 A
- Rated operational voltage 230/400 V AC, 48 V DC (per pole)
- Wide range of accessories

Ex9PN miniature circuit breakers can be combined with wide range of accessories including auxiliary and signal contacts, shunt trip release, undervoltage and overvoltage release. It is possible to create diversified combination of accessories. These combinations are only limited by total number, not by the type of accessories - all components fit together. It can be used up to three units of auxiliary or alarm contacts plus up to two units for release units.

DC Miniature Circuit Breakers Ex9BP-JX

- General purpose Direct Current (DC) Miniature Circuit Breakers
- Tested according to EN 60947-2
- Rated operating voltage 250 V DC per pole
- Rated current up to 63 A
- Rated short circuit breaking capacity 10 kA
- 1 to 4 pole versions
- Tripping characteristics C, K
- Wide range of accessories

General purpose DC Miniature Circuit Breakers Ex9BP-JX are designed for general direct current applications. Due to their polarity dependence it is necessary to respect the polarity of the current.

Fuse holders and disconnectors

Fuse holders and disconnectors

Professional Tips

- 1 5 year warranty
- 2 Three type sizes of cylindrical fuse links
- 3 Rated currents up to 100 A
- 4 1-pole to 3+N-pole version
- 5 Sealing possibility
- 6 AC and DC variants available
- 7 Easy mounting on DIN rail
- 8 Undemountable and robust construction

Cylindrical Fuse Holders Ex9F

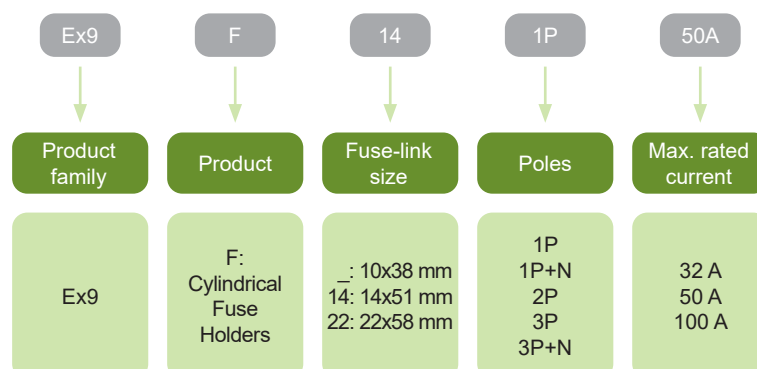

- Meet requirements of EN 60947-3
- Rated operating voltage 400/690 V AC
- Versions with rated current
 - 32 A (10 x 38 mm)
 - 50 A (14 x 51 mm)
 - 100 A (22 x 58 mm)
- Utilization category AC-20B at 400/690 V AC
- Sealing possibility

Cylindrical fuse holders for rated currents up to 100 A. Thanks to utilization category AC-20B at 400/690 V AC they cannot be used for switching under load. Very compact design with DIN rail mounting allows its usage in various applications. Fuse links of types gG and aM can be used with respect to maximum allowed power loss.

To be operated by qualified persons.

Isolators Ex9I125

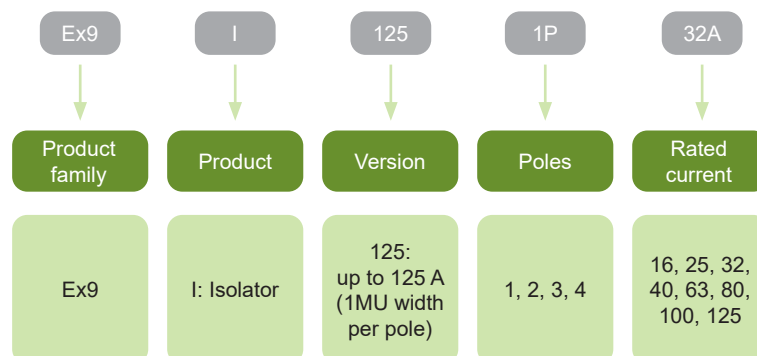

- Modular Isolators
- Rated current up to 125 A
- Rated voltage 230 / 400 V AC
- Rated short-time withstand current $I_{cw} = 12 \times I_e, 1 \text{ s}$
- Meet requirements of IEC / EN 60947-3
- Built-in lock mechanism for OFF position
- 1 up to 4-pole version

Isolators Ex9I125 can be used as a main switch in wide variety of applications. These switches are tested according to IEC / EN 60947-3 standards and also fulfill the requirements for the isolation functionality.

Utilization category AC-22A ensures possibility of switching mixed resistive and inductive loads with low overloads with $\cos \varphi = 0.65$. Subcategory A allows frequent operation.

Isolators of line Ex9I125 are produced in modular design with one module unit width per pole. Can be connected via standard busbars of both fork as well as pin type of connection.

Residual Current Devices

Professional Tips

- 1 5 year warranty
- 2 Variants from 10 to 500 mA $I_{\Delta n}$ available
- 3 Contacts state indication
- 4 Possibility to use interconnection busbars
- 5 Prepared openings for toggle sealing
- 6 Tripping chars B, C of MCB in Ex9BL, Ex9NLE and Ex9NL-N
- 7 Splited RCCB / MCB toggles in Ex9BL
- 8 Wide range of accessories for Ex9BL, Ex9NLE and Ex9NL-N
- 9 Robust construction
- 10 Easy mounting on DIN rail

RCCBs Ex9L-H, 10 kA

- Residual Current Circuit Breakers according to EN 61008-1
- Cond. rated short circuit strength I_{nc} 10 kA
- 2 and 4-pole versions
- Rated residual current 10, 30, 100, 300 and 500 mA
- Rated current up to 63 A
- Rated operational voltage 230/400 V AC
- AC, A, S and G types
- Indication of electrical tripping
- Suitable for applications from -25 to +60 °C

Ex9L-H residual current circuit breakers are suitable for domestic as well as industrial applications. They are based on permanent magnet principle. It brings the advantage of voltage independent function. Adequate voltage is only necessary when testing the RCCB with the test button. Magnetic RCCBs should be tested regularly with a period of one month.

S+A type, 2-pole

- S type of residual current circuit breaker based on A type sensitive on residual AC and pulsating DC current
- With time delay (insensitivity) 130 - 500 ms
- Surge current-proof 3000 A
- Suitable for protection against fire, as a main RCCB of a house or flat or as a protection against leakage currents (e.g. due to imperfect isolation)
- Selective with downstream installed AC or A type RCCB

RCCBs Ex9L-N, 6 kA

- Residual Current Circuit Breakers according to EN 61008-1
- Cond. rated short circuit strength I_{nc} 6 kA
- 2 and 4-pole versions
- Rated residual current 10, 30, 100, 300 and 500 mA
- Rated current up to 63 A
- Rated operational voltage 230/400 V AC
- AC, A, S and G type
- Indication of electrical tripping
- Suitable for applications from -25 to +60 °C

Ex9L-N residual current circuit breakers are suitable mainly for domestic applications. They are based on permanent magnet principle. It brings the advantage of Voltage independent function. Adequate voltage is only necessary when testing the RCCB with the T test button. Magnetic RCCBs should be tested regularly with a period of one month.

6 kA variant of the Ex9L-N residual current circuit breaker is intended mainly for low demanding application like basic protection in household installations.

RCCBs Ex9L-N, 6 kA

S+A type, 2-pole

- S type of residual current circuit breaker based on A type sensitive on residual AC and pulsating DC current
- With time delay (insensitivity) 130 - 500 ms
- Surge current-proof 3000 A
- Suitable for protection against fire, as a main RCCB of a house or flat or as a protection against leakage currents (e.g. due to imperfect isolation)
- Selective with downstream installed AC or A type RCCB

RCCBs Ex9CL-100, 10 kA

- Residual Current Circuit Breakers according to IEC / EN 61008-1
- Conditional rated short circuit strength I_{nc} 10 kA
- 2 and 4-pole versions
- Rated residual current 100, 300 mA
- Rated current up to 100 A
- Rated operational voltage 230/400 V AC
- S and S+A types
- Indication of electrical tripping

Ex9CL-100 residual current circuit breakers are suitable for domestic as well as industrial applications. They are based on permanent magnet principle. It brings the advantage of Voltage independent function. Adequate voltage is only necessary when testing of the RCCB with the T test button. Magnetic RCCBs should be tested regularly with a period of one month.

B type RCCBs Ex9LB63

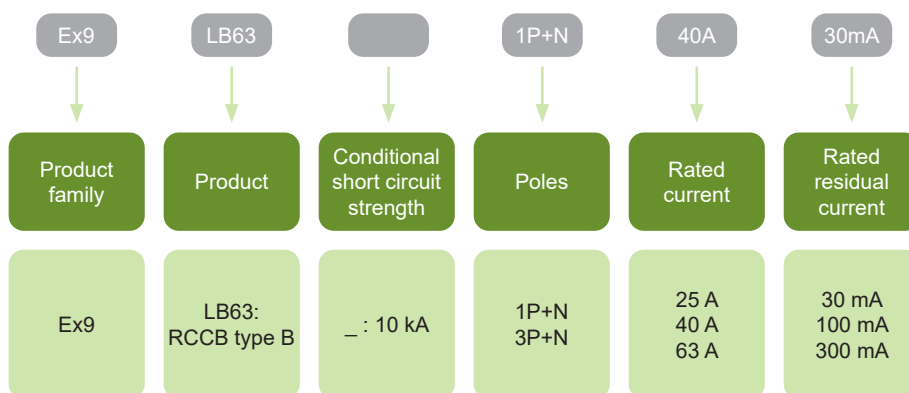

- Residual Current Circuit Breakers according to IEC/EN 61008-1 and IEC/EN 62423
- Cond. rated short circuit strength I_{nc} 10 kA
- B type
- 2 and 4-pole versions
- Rated residual current 30, 100 and 300 mA
- Rated current up to 63 A
- Rated operational voltage 230/400 V AC
- Indication of electrical tripping
- Suitable for applications from -25 to +40 °C

Residual current circuit breakers B type Ex9LB63 are suitable for domestic as well as industrial applications, where are used frequency inverters, PV plant, EV chargers and similar elements. B type provides a sensitivity to residual AC, pulsating and smooth DC current, together with high frequencies up to 1 kHz.

They are based on electronic technology, which brings advantages of more accurate measuring of residual current and, as a consequence, reduction of unwanted tripping. These devices also do not suffer with magnetization of the tripping unit. Thus, there is no mandatory testing period, but they must be tested regularly. On this testing period local law or regulations may apply. Recommend is to test it every 6 months in fair environment and every month in heavy condition.

RCBOs Ex9BL-H, 10 kA

- Residual Current circuit Breakers with Overload protection according to EN 61009
- Rated breaking capacity I_{cn} 10 kA
- 1+N-pole version
- Rated residual current 30, 100, 300 mA
- Rated currents up to 40 A
- B and C tripping characteristics of installed circuit breaker
- AC and A type of RCBO
- 2-module width
- Suitable for applications from -25 to +40°C

Ex9BL residual current circuit breakers are suitable for domestic as well as industrial applications. They are based on combination of residual current device with permanent magnet principle and circuit breaker with thermal overload release and magnetic short circuit current release. It brings the advantage of voltage independent function of the residual current device. Adequate voltage is only necessary when testing the RCBO with the T test button. Magnetic RCBOs should be tested regularly with a period of one month.

RCBOs Ex9BL-N, 6 kA

- Residual Current circuit Breakers with Overload protection according to EN 61009
- Rated breaking capacity I_{cn} 6 kA
- 1+N-pole version
- Rated residual current 30, 100, 300 mA
- Rated currents up to 40 A
- B and C tripping characteristics of installed circuit breaker
- AC and A type of RCBO
- 2-module width
- Suitable for applications from -25 to +40°C

Ex9BL residual current circuit breakers are suitable for domestic as well as industrial applications. They are based on combination of residual current device with permanent magnet principle and circuit breaker with thermal overload release and magnetic short circuit current release. It brings the advantage of voltage independent function of the residual current device. Adequate voltage is only necessary when testing the RCBO with the T test button. Magnetic RCBOs should be tested regularly with a period of one month.

- AC and A type of RCBO
- 1-module (18 mm) width
- Suitable for applications from -35 to +70°C

Voltage dependent Residual Current circuit Breakers with Overload protection Ex9NLE have only 1 module, so they can save one modular space in enclosure comparison to classical RCBO. They are based on electronic evaluation principle - more accurate measuring of residual current. These devices also do not suffer with magnetization of the tripping unit. Thus, there is no mandatory testing period, but they must be tested regularly. Local law or regulations may apply on utilization and testing period. The recommendation is to test it every 6 months in fair environment and every month in heavy condition.

The insulation test must be performed in the top terminals and with the device in the OFF position.

RCBOs Ex9NL-N 3P+N, 6 kA

- Residual Current circuit Breakers with Overload protection according to IEC / EN 61009-1
- Rated breaking capacity I_{cn} 6 kA
- 3+N-pole version
- Rated residual current 30, 300 mA
- Rated currents up to 40 A
- B and C tripping characteristics of installed circuit breaker
- AC and A type of RCD
- 4-module width
- Suitable for applications from -25 to +40°C

Ex9NL residual current circuit breakers are suitable for domestic as well as industrial applications. They are based on combination of residual current device with permanent magnet principle and circuit breaker with thermal overload release and magnetic short circuit current release. It brings the advantage of voltage independent function of the residual current device. Adequate voltage is only necessary when testing the RCBO with the T test button. Magnetic RCBOs should be tested regularly. Recommend is to test it every 6 months in fair environment and every month in heavy condition.

RCD add-on blocks Ex9LE

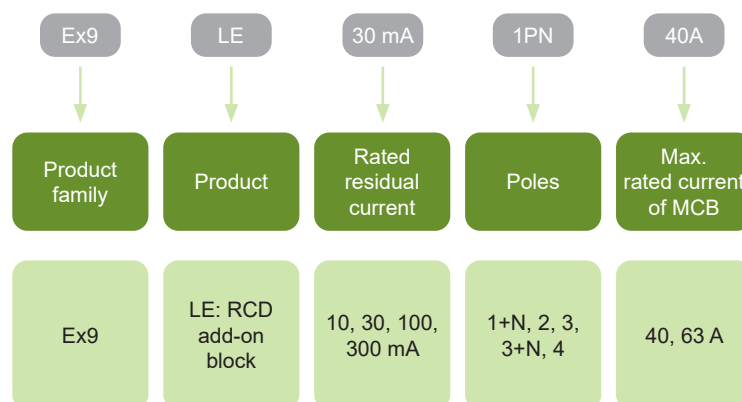

- Residual Current add-on blocks
- Tested according to IEC / EN 61009
- For combination with MCBs Ex9B
- Conditional rated short circuit strength I_{nc} 10 kA in combination with Ex9BH and 6 kA with Ex9BN
- 1+N up to 4-pole versions
- Rated residual current 10, 30, 100, 300 mA
- Rated currents up to 63 A
- Rated operational voltage 230/400 V AC
- AC type of RCD

Ex9LE residual current add-on blocks are suitable for domestic as well as industrial applications. They are based on electronic technology. It brings advantages of more accurate measuring of residual current and, as a consequence, reduction of unwanted tripping. (For possible use of this device, local legal requirements and conditions must be fulfilled.) These devices also do not suffer with magnetization of the tripping unit. Thus, regular testing is not necessary to preserve function of the device. To fulfill prescribed mandatory testing given by the product standard, it is recommended to test the device regularly with a period of one year.

Given pole version of the RCD add-on block must be combined with MCB of line Ex9B in the following way. 1+N-pole version of RCD add-on block is possible to combine with 1-pole MCB; 2-pole RCD block with 1+N or 2-pole MCB; 3-pole and 3+N-pole RCD block with 3-pole MCB, 4-pole RCD block with 3+N or 4-pole MCB. These variants enable to create very various combinations to obtain special devices with RCBO functionality.

Energy meters

Professional Tips

- 1 Important MID certification
- 2 Easy mounting on DIN rails in consumer units
- 3 Active and reactive energy
- 4 Programable by infrared eye
- 5 Separately countable forward and reverse energy = use for PV systems
- 6 Optional M-Bus or ModBus communication
- 7 S0 programmable output rate
- 8 Direct or indirect (CT) connection
- 9 1 or 3-phase types
- 10 1 or 2-tariff versions

Energy meters Ex9EM

- Basic Energy Meters according to EN 62052-11, EN 62053-21
- Mounting on DIN rails
- Operating voltage U_e 230/400 V AC
- Fixed rated current or adjustable by CT
- Multi-tariff or 1-tariff versions
- LCD or Mechanical register
- 1 or 4-module width versions

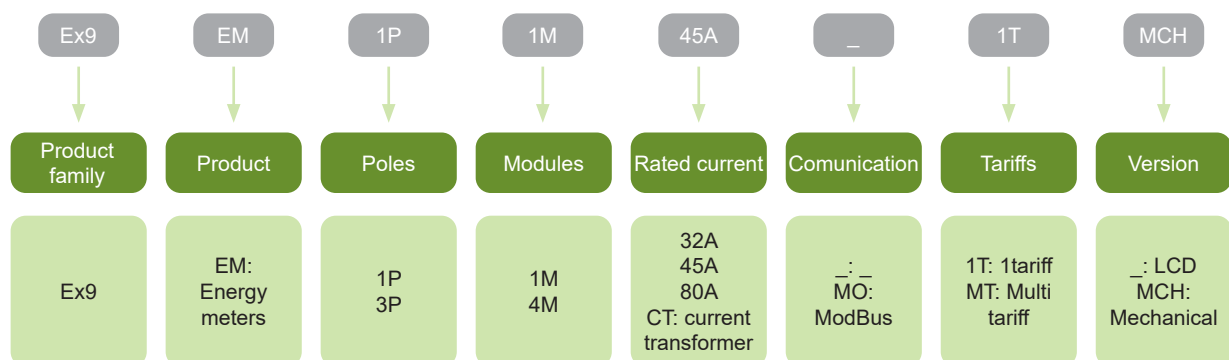

Energy Meters Ex9EM are basic meters of electric energy. We provide 6 types with various parameters. Rated current can be fixed or adjustable by Current Transformer. LCD or Mechanical register version is available.

Installation Energy Meters Ex9EM are suitable for residential and industrial applications. The biggest advantage is mounting on DIN rails inside consumer units. They will find their use everywhere where it is needed to count consumed energy.

Energy meters are offered in 1 or 4-modules width versions.

Ex9EM 1P 1M 80A MO MT as only one has Multi-tariff mode and RS485-ModBus communication which can read and display the following variables: kWh, active energy, reactive energy and active power. Software for communication can be downloaded from our website.

- Infrared eye
- Software and hardware for IR communication

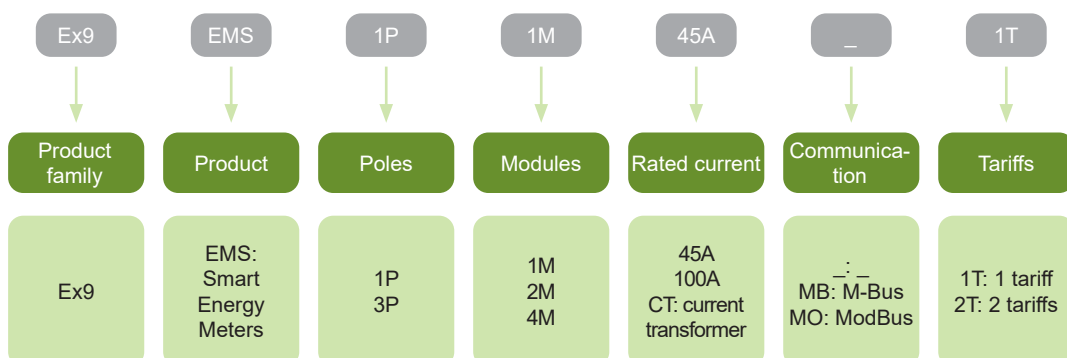

Energy Meters Ex9EMS are smart meters of electric energy. We provide wide range of types with various parameters. Rated current can be fixed or adjustable by Current Transformer. LCD display is a matter of course together with infrared eye for easy read out. Possibility of M-Bus or ModBus communication do from energy meters proper smart device.

Installation Smart Energy Meters Ex9EMS are suitable for residential and industrial applications. The biggest advantage is mounting on DIN rails inside consumer units. They will find their use everywhere where it is needed to count consumed energy.

We offer even cable for IR communication and software can be downloaded from our website.

Current Transformers CT

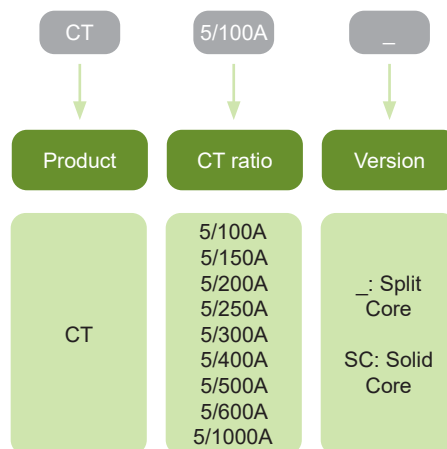

- Split core or solid core
- Primary current up to 1 000A

We offers wide range of solid core and split core current transformers. Their purpose is in measuring primary currents and produce a proportional secondary current signal. They are perfectly suitable for installation in combination with a Ex9EMS 3P 4M CT smart energy meters and Ex9EM 3P 4M CT 1T energy meter.

Split core CTs are designed for installation into existing plants where removal of busbars/cable lugs prevent installation of standard current transformers.

Motor protective circuit breakers Ex9SN25B

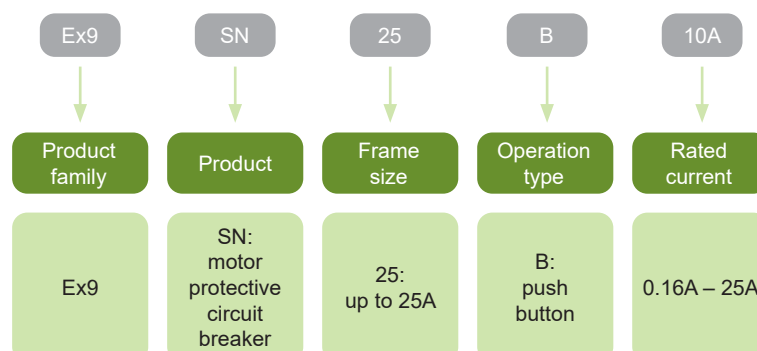

- Manual motor protective circuit breakers
- Meet requirements of EN 60947-2 and EN 60947-4-1
- Rated current I_n up to 25 A at 415 V AC-3
- Rated operating voltage U_n up to 400/415 V
- Short-circuit protection
- Disconnect function
 - Overload protection
 - Loss-phase protection
- Suitable for three and single-phase applications
- Wide range of accessories

Manual motor starters are electromechanical protection devices for the main circuit. They are used mainly to switch motors manually ON/OFF and protect them fuseless against short circuit and loss-phase.

Fuseless protection with a manual motor starter saves costs, space and ensures a quick reaction under short-circuit condition, by switching off the motor within milliseconds.

Manual motor starter combinations are setup together with contactors and overload relays.

- Auxiliary contacts synchronous with main contacts of the device
- Signal contacts active on electrical tripping of the circuit breaker
- Shunt trip releases
- Locking devices
- Undervoltage releases
- Overvoltage release
- According to IEC/EN 60947-1 and IEC/EN 60947-5-1

Accessories are designed in the way to be possible to combine different types with one installation device. It can be used up to two releases plus up to three units of auxiliary or signal contacts (two units in case of AX3122 with two pairs of contacts) plus one unit of RCD-block (only for Ex9B MCBs).

Release units are mounted from the left to the installation device.

Auxiliary and signal contact units must be mounted from the left to the device or to the release unit(s) when installed. Contact units are equipped with changeover (CO) combination(s) of contacts.

The Ex9UE1+2 25 line is a group of Class I+II Surge Protective Devices. They are intended as a protection against direct hit of lightning strokes of medium intensities. In standard three phase TN-C grid, they provides protection up to LPL I, II requirements given in EN 62305 with total lightning current introduced into electrical installation of 75 kA and total lightning stroke current 150 or 200 kA based on physical configuration and mutual position of grounding point of lightning rod, grounding point of the electrical installation and place of SPD installation.

The design of Ex9UE1+2 25 is hybrid based on combination of high energy Metal Oxide Varistors and isolation Spark Gap. This combination brings lower response time thanks to fast MOV and low voltage SG in comparison to a pure SG solution. The serial connection of MOV provides limitation of follow current characteristics for SG, but also full isolation due to serial connection of SG to MOV.

The main characteristics are defined by MOV part dominantly. Resulting protection level and response characteristics not only fulfill requirements of class I SPDs but also for class II ones. Ex9UE1+2 25 provides protection for both classes I and II. The modular design with plug in inserts allows simple and quick replacement of function modules in case of MOV is beyond if its lifespan due to high intensity or often occurrence of overvoltage peaks.

The Ex9UE1+2 12.5 line is a group of Class I+II Surge Protective Devices. They are intended as a protection against indirect and low intensity direct hits of lightning strokes. In standard three phase TN-C grid, they provides protection to LPL III, IV requirements given in EN 62305 with total lightning current introduced into electrical installation of 37.5 kA and total lightning stroke current 75 or 100 kA based on physical configuration and mutual position of grounding point of lightning rod, grounding point of the electrical installation and place of SPD installation.

The design of Ex9UE1+2 12.5 is based on high energy Metal Oxide Varistors. Such design provides low response time and ensures characteristics for both classes I and II. The modular design with plug in inserts allows simple and quick replacement of function modules in case of MOV is beyond if its lifespan due to high intensity or often occurrence of overvoltage peaks.

- Maximum continuous operational voltage U_c from 275 V up to 440 V AC
- Versions with 1+0, 1+1, 2+0, 3+0, 3+1 and 4+0 connection
- Plug-in module design
- With and without remote indication contact
- Device status indicator

The Ex9UE2 line is a group of Class II Surge Protective Devices. They are intended as a protection against transient overvoltage caused by fast switching operations or indirect hits of lightning strokes (residuum effects).

It is recommended to install Class II SPDs every 10 – 20 meters of cable length repetitively, typically to main and sub distribution boards. The Ex9UE2 20 440 are designed for direct coordination with Class I SPDs of line Ex9UE1 35. In case of Ex9UE2 20 275, the coordination with the line Ex9UE1 35 is done by means of 10 m cable length.

The design of Ex9UE2 is based on Metal Oxide Varistors. Such design provides very low response time. The modular design with plug in inserts allows simple and quick replacement of function modules in case of MOV is beyond if its lifespan due to often occurrence of overvoltage peaks.

- Maximum continuous operational voltage U_c 275 V AC
- Design based on Y connection of functional elements
- Plug-in module design
- With and without remote indication contact
- Device status indicator on the front side

The Ex9UE3 line is a group of Class III Surge Protective Devices. They are intended as a fine protection against transient overvoltage, installed downstream to Class II SPDs. The application field of Ex9UE3 is protection of sensitive electronics used in or close to distribution board, typically home automation, IT systems etc. The Y connection of functional elements provides balanced protection of L and N conductor towards PE thanks to identical MOVs for both working conductors and full isolation due to connection to PE via Spark Gap.

Class III SPDs should be installed maximum 5 meters from the protected device. Coordination with Class II SPDs Ex9UE2 20 is defined also for near installation. To reach best parameters, it is recommended to install both classes with mutual distance of 5 meters of connecting cables.

The design of Ex9UE3 is based on Metal Oxide Varistors. Such design provides very low response time. The modular design with plug in inserts allows simple and quick replacement of function modules in case of MOV is beyond if its lifespan due to often occurrence of overvoltage peaks.

Installation contactor with manual operation Ex9CHM

- Meet requirements of IEC/EN 61095
- Rated current up to 16, 20, 25, 32, 40, 63 A
- Rated voltage 24, 110, 220-240 V AC
- Rated frequency 50/60 Hz
- 2 or 4-contact versions
- Various contact combinations
- 4 selectable position (O , AUTO , I , I+P)

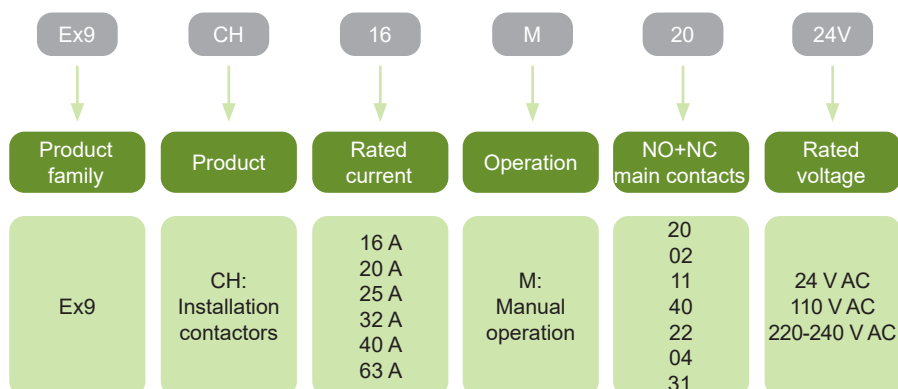

Installation contactors with manual operation Ex9CHM are suitable for household and building modular distribution boards. It is used as remote or manual switch for circuit control under AC-7b and AC-7a application category (e.g. mixers, blenders, fans, central vacuum).

The contactor shall not be used for breaking short-circuit current, therefore it should be used with a proper short-circuit protection device.

The contactor has 4 selectable positions:

- O - permanently OFF
- AUTO - switched while the supply voltage is provided to the coil
- I - manually switched , automatically returns to "AUTO" position after the supply voltage ends
- I+P - permanently ON

Impulse relays Ex9JU

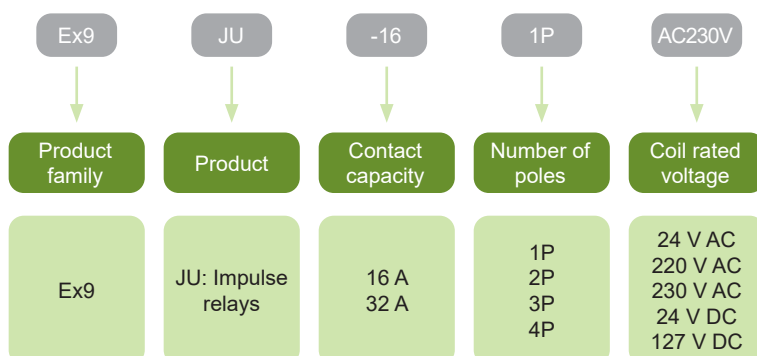

- Meet requirements of IEC / EN 61810
- Rated current 16 or 32 A
- Control coil voltage 24, 220 or 230 V AC and 24 or 127 V DC
- Rated frequency 50 Hz
- 1, 2, 3 or 4-contact versions

Impulse relays Ex9JU are suitable mainly for household where is low power consumption required. Change-over contacts are switched while impulse is provided to the coil. They are mainly used in building automation processes for switching and controlling lightings, heating systems, ventilations, pumps, heating pumps and other applications.

Impulse relays are offered in two variants of rated current 16 or 32 A. Each version has possibility of up to 4 change-over contacts. Hardware switches on a front of device for manual control.

Change-Over Switches Ex9BT

- Modular Change-Over Switches
- Meet requirements of EN 60669-1
- Rated current 16 and 32 A
- Rated operating voltage 230/400 V AC
- Versions with and without independent LED signal lamp
- LED rated voltage 48 or 230 V AC/DC
- 1 up to 4-pole versions
- Various contact combinations

Installation switches and change-over switches Ex9BT are designed and intended for switching of auxiliary, control, measuring and other circuits.

They are available in variants with NO, NC and CO contacts. Basic versions with only NO contacts are equipped with toggle in green colour. Types with only NC contacts are delivered with red toggles. All other variants are designed with neutral black toggle.

Besides versions with switch function only and three position (I-0-II) switches, there are available also variants where switches and signal lamp are combined in one device. The signal lamps have separate circuit independent on the contact ones. The colour of used LED is white.

Signal lamps Ex9PD

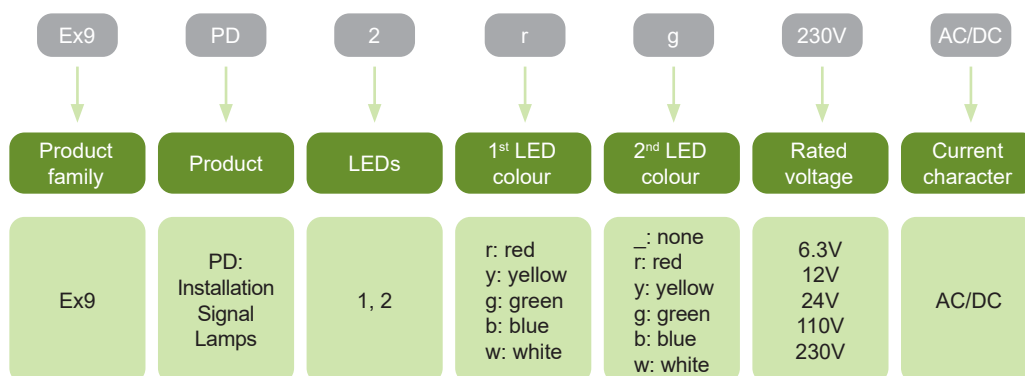

- Installation Signal Lamps
- Meet requirements of IEC / EN 60947-5-1
- LED technology
- Rated operating voltage 6.3 to 230 V AC/DC
- Width 1 MU
- 1 and 2-LED versions
- Various colours and colour combinations

Installation signal lamps Ex9PD are designed and tested according to standard IEC/EN 60947-5-1. They are based on LED technology and suitable e.g. for circuit status indication.

There are available versions with rated operating voltage from 6.3 up to 230 V AC/DC, with 1 and 2 LEDs in various colours and also all combinations of LED colours in double lamp devices to cover all possible applications.

Signal lamps Ex9PDe

- Installation Signal Lamps
- Meet requirements of IEC / EN 60947-5-1
- LED technology
- Operating voltage 24, 48 and 230 V AC/DC
- Width 1 MU
- 1, 2 and 3-LED versions
- Dual-colour LED in Ex9PD1e, Ex9PD2e

Installation signal lamps Ex9PDe are designed and tested according to standard IEC / EN 60947-5-1. They are based on LED technology and suitable e.g. for circuit status indication.

There are available versions with rated operating voltage 24, 48 and 230 V AC/DC, with one or two dual-colour (green/red) LEDs. The last variant with three red LEDs is available with operating voltage 230/400 V AC. This kind of signal lamp is used mainly for phase voltage presence check in 3-phase connections.

All versions are designed as 1 module unit width devices including the three LED version. Used internal technology of LED lights ensures very low power consumption during operations and very high lifetime.

Staircase Switches Ex9SS

- Installation Staircase Switches
- Rated operating voltage 230 V AC
- Time adjustment range from 0.5 to 10 min.
- Manual control switch on the front side
- Basic and programmable version
- 3-wire or 4-wire connection

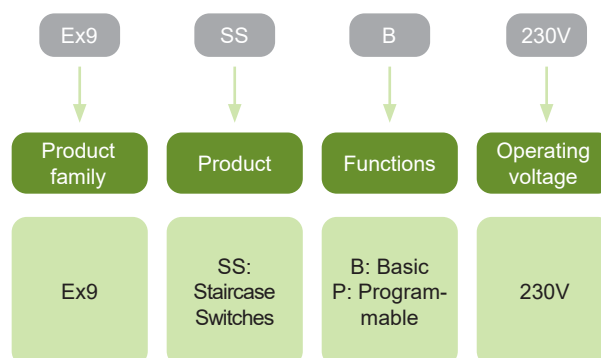

Installation Staircase Switches Ex9SS are suitable mainly for light switching in many various residential, office and industrial applications, e.g. lighting of staircases or entrance areas.

Their AUTO switching time can be adjusted up to 10 minutes using rotary switch on the front side, or they can be manually switched in ON/OFF states by the another rotary switch.

Programmable Installation Staircase Switches Ex9SSP have the same use as Ex9SSB, but with additional functions:

- a - Staircase automat with delayed return and signaling before switching off by two flashes of light
- b - Programmable staircase automat with delayed return and signaling before switching off by two flashes of light. Programmable delay is enabling time prolongation by number of button pressing, e.g. if the set period is 5 min and you press button 3 times, the time period of switch ON will be 15 min (maximum prolong time - 30 min). Reset of this period can be done by pressing the button for more than 2 sec.

Light Intensity Switches Ex9LAS and Ex9LDS

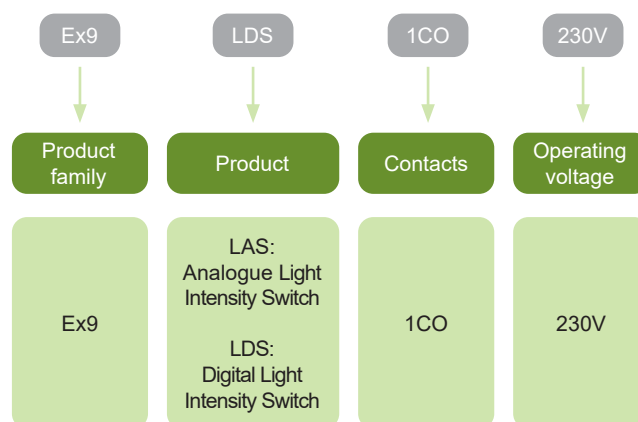

- Rated operating voltage 230 V AC
- Analogue and digital version
- Without and with integrated time switch
- Random switching mode (Ex9LDS)
- Adjustable light sensitivity up to 50 000 lx
- External brightness sensor with IP44 rating

Light Intensity Switches Ex9LAS and Ex9LDS are used for light switching according to actual daylight intensity (Ex9LDS device also according to time), so the light fixtures are switched only if necessary and it can save money for consumed energy.

This switch can automatically change between summer and wintertime. It operates in daily, weekly or yearly switching program and can be connect to light control systems with other devices.

External brightness sensor is included in the scope of delivery.

Light Intensity Switches Ex9LAS and Ex9LDS

Analogue version

- Two light adjustment ranges LUX1 (1 - 100 lx) and LUX2 (100 - 50 000 lx), TEST for permanent change of contact
- Adjustable time delay (0 - 2 min) to eliminate short term fluctuation in illumination
- LED indication on front of the device
- Surface-mounted brightness sensor in the scope of delivery

Digital version

- Combination of time switch and light intensity switch - time switch is superior
- Daily, weekly and yearly program of integrated time switch
- Light adjustment range 10 - 50 000 lx
- Random switching function
- Sealable transparent cover of front panel
- Surface-mounted brightness sensor in the scope of delivery

Time relays Ex9TR

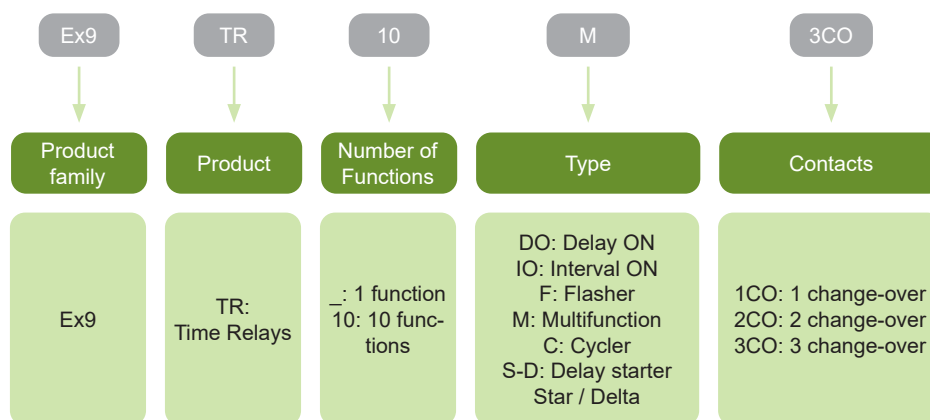

- Rated operating voltage 12 - 240 V AC/DC
- Adjustable time range
- Manual control switches on the front side
- Types of time relay
 - Single-function: Delay ON
 - Single-function: Interval ON
 - Single-function: Flasher
 - Multifunction: 10 functions
 - Asymmetric cycler
 - Delay starter Star / Delta

Ex9TR time relays are used in automation, control and regulation (ventilation, lighting, heating, etc.). All our time relays can be powered by universal voltage 12 - 240 V AC/DC. The devices have manual control switches on the front for setting the time.

Types of time relay:

- **Single-function time relay** are offered in 3 types (Delay ON, Interval ON and Flasher).
- **Multifunction time relay** contains 10 adjustable functions with 1 or 3 changeover contacts.
- **Asymmetric cycler** with the possibility of setting the closing and opening time.
- **Delay starter Star / Delta** designed for starting motors.

Professional Tips

- 1 5 year warranty
- 2 Power range from 8W up to 100W
- 3 Intergrated internal protections
- 4 Output voltage from 5V DC up to 24V DC

- 5 Version with built-in transformer
- 6 12V or 230V AC versions
- 7 Sound level 75 dB
- 8 Easy mounting on DIN rail

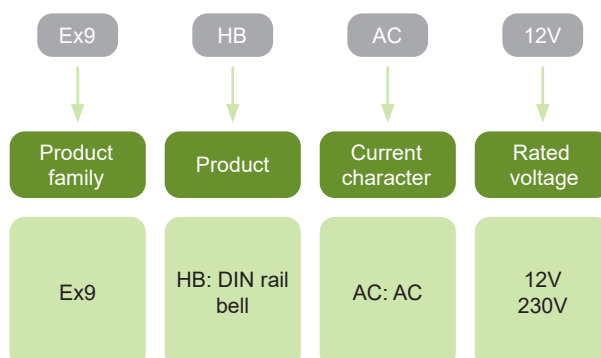

DIN Rail Bell Ex9HB

- DIN Rail Bell according to IEC/EN 60947-5
- Rated working voltage 12 V or 230 V AC
- Rated frequency 50 Hz
- Sound level 75 dB
- 1-module width
- Suitable for applications from -5 to +40°C

Ex9HB DIN rail bell is suitable mainly for household applications as a door bell or can be used as alarm. This bell is intended to be installed in enclosure on DIN rail, which brings advantage of not disturbing original design of your home. To cover whole building with ringing sound the sound level is minimally 75 dB.

Power supplies Ex9PS

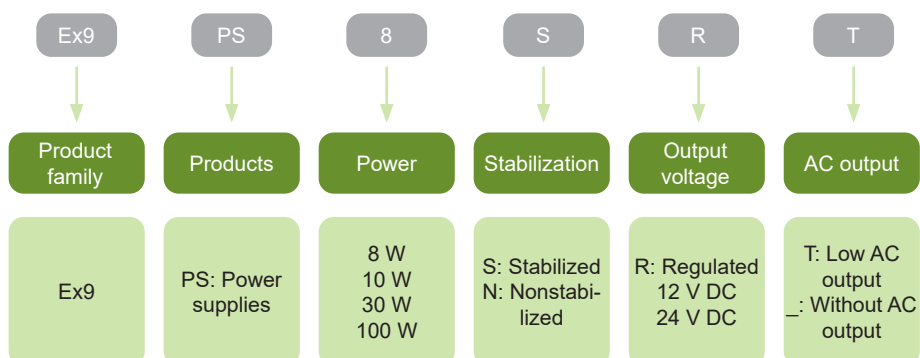

- Power range from 8 W up to 100 W
- Version with built-in transformer for small output AC voltage
- Types of output voltage
 - 12 V DC stabilized
 - 24 V DC stabilized
 - 12-24 V DC stabilized
 - 5-24 V DC stabilized
 - 24 V DC nonstabilized
 - 24 V AC
- integrated internal protections

DIN-rail mounted power supplies Ex9PS provide a convenient solution for powering DC operated devices like bells, videophones, vending machines, security systems, etc. Since these power supplies are air convection cooled, no cooling fans are needed. Output voltages from these supplies range from 5 V up to 24 V DC with power ratings from 8 W up to 100 W.

All power supplies have several built-in protections.

Power supplies

- Stabilized voltage output
- Version with 12 V DC, 24 V DC and adjustable (12-24 V DC) stabilized output
- The output current is limited by an electronic fuse, when the maximum current is exceeded, the source switches off, after a short delay it switches on again
- Thermal protection - in case of thermal overload the source switches off, after cooling it switches on again

Oversvoltage release	OVT31 280V AC±5%	100556
Max. number of installed accessories is 3 pcs of one contact units (AX3111, AL3111) or 2 pcs of two contact units (AX3122, AXL31) and 2 pcs of releases (SHT31, UVT31, OVT31)		

Electrical parameters

Tested according to	IEC / EN 60898-1
Rated op. voltage U_e	230/400 V AC
Rated frequency	50 Hz
Rated breaking capacity I_{cn}	6 kA
Rated current	1 — 40 A
Tripping characteristics	B, C
Rated impulse withstand voltage U_{imp}	4 kV
Rated insulation voltage U_i	690 V AC
Mechanical service life	15 000 operation cycles
Electrical service life	10 000 operation cycles
Selectivity class	3
Line voltage connection	arbitrary above or below

Mechanical parameters

Device width	13.5 mm (per pole)
Device height	83 mm (89 mm including rail clip)
Frame size	45 mm
Mounting	easy fastening onto 35 mm device rail (DIN)
Degree of protection	IP20
Terminals	open mouthed
Terminal capacity	1 — 16 mm ²
Fastening torque of terminals	1.5 Nm
Ambient temperature	-25 — +70 °C
Altitude	≤ 2000 m
Relative humidity	≤ 95 %
Resistance to humidity and heat	class 2
Pollution degree	2
Installation class	III
Weight	0.086 kg (per pole)

Residual Current Circuit Breakers type B, 10 kA

General parameters

Electronic evaluation principle - more accurate measuring of residual current
Suitable for household as well as industrial applications
B type - sensitivity to residual AC, pulsating and smooth DC current, high frequency up to 1 kHz
Device must be tested regularly. Local laws or regulations can be applied. Recommend is a testing period of 6 months in normal condition, 1 month in heavy conditions
In case all wires are not connected at 4-pole RCCB, it is necessary to ensure that circuit of the test button T is supplied with appropriate voltage (by means of mutual connection of respective terminals of the RCCB, see wiring diagram)
Internal SPD protection to improve service life and make it applicable to multiple installation environments
Parallel construction of the type A/AC and type B internal parts. If required voltage is not available for type B internal electronics, the protection type A and AC will be still provided
Indication of electrical tripping

Technical Data Ex9BL-H

Residual Current circuit Breakers with Overload protection Ex9BL-H, 10 kA

General parameters

Combination of MCB and RCCB in one case - saves 50 % space in comparison to combination of stand-alone MCB and RCCB
Tripping characteristics of installed circuit breaker B and C
AC and A type of residual current device
1+N-pole version
Suitable for household as well as industrial applications
Permanent magnet principle of residual current device - Voltage independent tripping function
Magnetic RCBOs should be tested regularly with a period of one month. This is a responsibility of the user of an installation given by law
Signaling of contacts status

Electrical parameters

Tested according to	EN 61009
Rated operating voltage U_e	230 V AC
Min. voltage for RCD function	voltage independent
Voltage range of the test button T	195.5 — 253 V AC
Rated frequency f	50/60 Hz
Rated breaking capacity I_{cn}	10 kA
Rated current I_n	6 — 40 A
Rated residual current $I_{\Delta n}$	30, 100, 300 mA

Technical Data Ex9NLE

One-module Residual Current circuit Breakers with Overload protection Ex9NLE, 6 kA

General parameters

Saves one modular space in comparison to classical RCBO
Tripping characteristics of integrated circuit breaker B and C
AC and A type of residual current device
1+N-pole version
Electronic evaluation principle - more accurate measuring of residual current
Voltage dependent RCBO
The insulation test must be performed in the top terminals and with the device in the OFF position
Device must be tested regularly. Local law or regulations may apply on utilization and testing period. Recommend is a testing period of 6 months in normal condition, 1 month in heavy conditions

Technical Data Ex9LE

RCD add-on blocks Ex9LE

General parameters

RCD add-on blocks for combination with miniature circuit breakers Ex9B
Allow to create various combinations with MCBs with functionality of RCBO
AC type of residual current device
1+N, 2, 3, 3+N and 4-pole versions
Input voltage is connected via MCB
Electronic technology of residual current device - more accurate measuring of residual current, not necessary to test monthly.
Recommended testing period one year to fulfill requirements of product standards. Contrary to permanent magnet-based devices, the testing is not necessary to preserve proper sensitivity of the RCD
Given pole version of the RCD add-on block must be combined with MCB Ex9B in the following way. 1+N-pole version of RCD add-on block is possible to combine with 1-pole MCB; 2-pole RCD block with 1+N or 2-pole MCB; 3-pole and 3+N-pole RCD block with 3-pole MCB, 4-pole RCD block with 3+N or 4-pole MCB

Motor protective circuit breakers

General parameters

For protection of various motor applications

Provide overload, short-circuit and phase-failure protection

Can replace the circuit breaker and thermal relay to reduce costs and space

Temperature compensation function to reduce the impact of ambient temperature

Technical Data Accessories

Accessories for Ex9B, Ex9PN, Ex9BI, Ex9IP devices

Auxiliary and signal contact units AX31, AL31, AXL31

General parameters

With one device, there can be used up to three contact units with single CO contact or up to two contact units with 2 CO
Contact units can be combined in an arbitrary way
Contact units are mounted to the device from the left
In case of installed release unit(s), contact modules are mounted left to the release(s)
Auxiliary contacts synchronous with main contacts of the device
Signal contacts active on electrical tripping of the circuit breaker (tripping signal contacts)

Wiring diagrams

3+0 TN-C

Connection type 3+0 in TN-C system consists of three identical SPDs.

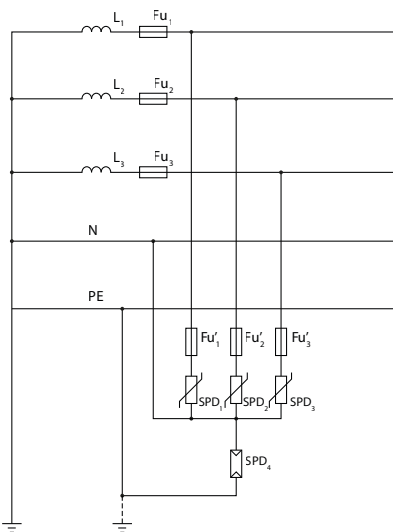

Fu_1 - Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$.

4+0 TN-S

Connection type 4+0 in TN-S system consists of four identical SPDs. This type of connection is suitable mainly to suppress longitudinal type of transient overvoltage, typically caused by atmospheric stroke. The advantages lay in uniform conducting of lightning current from phase and N-conductors. It also effectively protects insulation of conductors suffered with consecutive effects of a lightning stroke. This connection does not provide optimum protection in case transversal overvoltage (typically caused by wanted and unwanted fast switching processes) and thus it is not the best solution for protection of equipment and end consumers. It follows from the fact that residual transversal overvoltage between L and N conductors is given by protection level of two SPDs connected in a series. (e.g. Up of $SPD_1 + SPD_4$ for L_1 -N

Fu_1 - Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$.

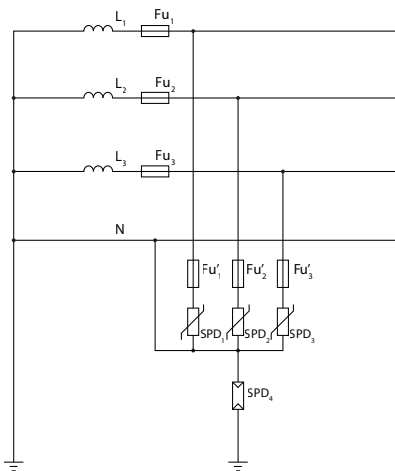

3+1 TN-S

Connection type 3+1 in TN-S system consists of three identical SPDs and one sum spark gap. It is suitable mainly to suppress transversal type of transient overvoltage, typically caused by wanted and unwanted fast switching processes. Main advantage is minimization of residual transversal overvoltage between L and N, which is defined dominantly by protection level of a single SPD. This diagram is recommended for protection of end consumers in TN-S system. A disadvantage for suppression of atmospheric longitudinal overvoltage follows from non-uniform protection of L and N conductors. When used for protection against longitudinal effects, usually as a protection against lightning stroke current (SPD class I), I_{imp} of sum spark gap SPD_4 must be min. $4 \times I_{imp}$ of SPD_1, SPD_2, SPD_3 .

Fu_1 - Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$.

Surge Protection Devices Type 1+2 and Type 2

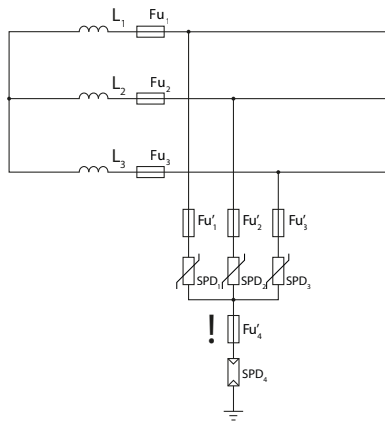

Wiring diagrams

3+1 TT

In order to keep insulation status between N conductor and ground potential, connection 3+1 is recommended for TT systems. It provides maximum protection against transversal transient overvoltage and significantly limits longitudinal one.

Fu_1 - Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$.

3+1 IT

3+1 connection in IT system is suitable for protection against both transversal as well as longitudinal overvoltage. Due to grounded sum spark gap allows effective reduction of effects caused by lightning currents. Particular SPDs are dimensioned to "phase" voltage of the system (i.e. to 230 V in 230/400V grid). An important difference to 3+1 connection in TN-S system is back up fuse for sum spark gap. This protection has to be used in IT systems. It ensures insulation status in case of spark gap malfunction like uninterrupted follow currents.

Fu_1 - Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$. $Fu'_4 \leq \text{Max. back up fuse of the sum spark gap SPD}_4$.

Note: Connection diagram is indicative only. There have to be observed and fulfill potential other requirements, e.g. insulation tests of sum spark gap etc., in actual IT system.

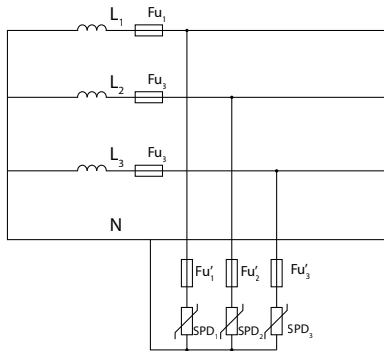

3+0 IT

This type of connection is suitable for protection against transversal overvoltage caused by switching processes. Particular SPDs must be dimensioned for phase-phase voltage.

Fu_1 - Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs (transformed to single phase voltage)}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$.

Surge Protection Devices Type 1+2 and Type 2

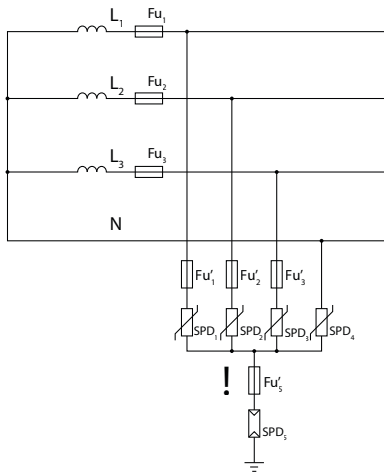

Wiring diagrams

3+0 local isolated system with N conductor (hospitals, chemical industry, etc.)

This type of connection is suitable for protection against transversal overvoltage caused by switching processes. Because such system is designed in order to maximize availability of main voltage, there must be assumed first fault in the system as a standard operational regime. Due to this reason, particular SPDs must be dimensioned for phase-phase voltage (i.e. to 400 V in 230/400 V system).

Fu_1, Fu_2, Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$.

4+1 local isolated with N conductor (hospitals, chemical industry, etc.)

This connection is suitable for limitation of both transversal as well as longitudinal surges. Thanks to SPD_4 , it provides much fine and balanced protection of all phase conductors in comparison to connection 3+1. It also more effectively limits phase – phase transversal overvoltage. Particular devices SPD_1 - SPD_4 are dimensioned for phase voltage (i.e. to 230 V in 230/400 V system). As in standards IT system, sum spark gap SPD_5 has to be protected with back up fuse to ensure insulation of the system. **Local requirements on the sum spark gap have to be followed in particular applications.**

Fu_1, Fu_2, Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$. $Fu_5 \leq \text{Max. back up fuse of the sum spark gap } SPD_5$.

3+1 local isolated with N conductor (hospitals, chemical industry, etc.)

Situation is similar to 4+1 connection. Particular devices SPD_1 - SPD_3 are dimensioned for phase - phase voltage (i.e. to 400 V in 230/400 V system) not to be overloaded in case of the first, generally non-tripped, fault. This connection is suitable for consumers for which transient overvoltage between phase and N conductors matters most. Sum spark gap SPD_4 has to be protected with back up fuse. **Local requirements on the sum spark gap have to be followed in particular applications.**

Fu_1, Fu_2, Fu_3 represent main protection (fuses, circuit breaker) in the installation. In case when $Fu_1, Fu_2, Fu_3 > \text{Max. back-up fuse for given SPDs}$, Fu'_1, Fu'_2, Fu'_3 have to be used. $Fu'_1, Fu'_2, Fu'_3 \leq \text{Max. back-up fuse of the SPDs}$. $Fu_4 \leq \text{Max. back up fuse of the sum spark gap } SPD_4$.

Technical Data Ex9TR DO / IO / F

Single-function time relay

Functions

Ex9TR DO 1CO - Delay ON

When the supply voltage is applied, the time delay T begins. At the end of the timing, the relay closes and this state lasts until the supply voltage is disconnected.

If the control contact is closed and then the supply voltage is connected, the relay is open and the timing does not start until the control contact is opened. When the timing is over, the relay closes. If the control contact is closed during timing, the timing is interrupted and does not resume until the control contact is opened.

Ex9TR IO 1CO - Interval ON

When the supply voltage is applied, the relay closes and the time delay T begins. At the end of the timing, the relay opens and this state lasts until the supply voltage is disconnected.

If the control contact is closed and then the supply voltage is connected, the relay closes and the timing does not start until the control contact is opened. After completion of the relay timing, the relay opens. If the control contact is closed during timing, the timing is interrupted and does not resume until the control contact is opened.

Ex9TR F 1CO - Flasher

When the supply voltage is applied, the relay closes and the time delay T begins. At the end of the timing, the relay opens and the time delay T runs again. After the end of the timing, the relay closes again and the sequence is repeated until the supply voltage is disconnected.

If the control contact is closed during timing, the timing is interrupted and does not resume until the control contact is opened.

Note: The relays are initiated by the supply voltage, i.e. it performs 1 cycle when the voltage is applied.

Technical Data Ex9HB

DIN Rail Bell

General parameters

Suitable mainly for household applications.

1-module width

Rated operating voltage are 12 V and 230 V AC.

It is recommended to remove dust from the device daily.

Electrical parameters

Tested according to	IEC/EN 60947-5
Rated op. voltage U_e	12V or 230 V AC
Rated frequency	50 Hz
Rated impulse withstand voltage U_{imp}	4 kV
Rated insulation voltage U_i	230 V
Sound level	≥ 75 dB
Max. continuous ringing	< 1 min

Mechanical parameters

Device width	18 mm
Device height	83.8 mm
Frame size	45 mm
Mounting	easy fastening onto 35 mm device rail (DIN)
Degree of protection	IP20
Terminals	lift
Terminal capacity	1.5 — 6 mm ²
Fastening torque of terminals	0.5 Nm
Ambient temperature	-5 — +40 °C
Altitude	≤ 2000 m
Relative humidity	≤ 95 %
Pollution degree	3
Installation class	III
Weight	0.072 kg / 0.069 kg

Power supplies

General parameters

Thermal protection - in case of thermal overload the source switches off, after cooling it switches on again

The output current is limited by an electronic fuse, when the maximum current is exceeded, the source switches off, after a short delay it switches on again

Stabilized output voltage
